PROFILE

System Engineer and Software Developer with over 4 years of experience, specialized in Java. Expert in data management with PostgreSQL, AWS Redshift, and SQL, as well as in creating CLI applications for DBT documentation and metrics. Familiar with Jira for project management. Additionally, experienced in working with microservices architecture and hexagonal architecture for building scalable and maintainable systems. Skilled in test automation using Selenium, ensuring software quality through robust automated testing strategies

WORK EXPERIENCE

CR CARS

Ene 2020 - Dic 2020

- I worked as a Software Developer, creating the backend for a dealership's web application using MySQL for database management. I ensured seamless integration with its web version while collaborating closely with the development team. My responsibilities included applying best practices in database management using MySQL and enhancing the application's performance. Additionally, I utilized Jira for project management and tracking progress. I also have experience in test automation using Selenium to ensure software quality

APPSLIFE

Ene 2021-Dic 2022

- I worked as a Java Developer for one year, where I was responsible for developing and maintaining robust web applications. My role involved designing and implementing efficient server-side logic, optimizing database interactions with PostgreSQL to improve performance, and ensuring seamless integration with front-end components. I collaborated closely with front-end developers to deliver scalable and user-friendly applications that met business requirements and enhanced user experience. Additionally, I have strong expertise in test automation using Selenium, developing and executing automated test scripts to validate functionality, improve software reliability, and accelerate the deployment process. I also utilized Jira for project tracking and coordination

ACCENTURE

Ene 2023 - Jul 2023

- Professional internship as a web developer supporting the digital web channel of a multinational energy company that requested Accenture's services. During this time I did support in the field of software development especially on the back side and some tasks on the front side.

360 MARKETING SERVICES

Ago 2023 - Abr 2024

- I provided my services as a Java software developer for a self-management portal of a Colombian bank. I handled various back-end and front-end requirements, working with Django for the microservices and Python for the interaction and creation of different components. I was also responsible for unit testing the entire portal on both fronts, implementing back-end tests with Django's testing framework

LINKTIC

Sep 2024 - April 2025

- I have been working as a Full Stack Developer at Linktic for the past seven months, where I am responsible for addressing requirements from the Bogotá Chamber of Commerce. My role involves developing and maintaining both backend and frontend solutions. On the backend, I work with Java, ensuring robust server-side logic and seamless database interactions. On the frontend, I utilize Angular to create dynamic and user-friendly interfaces that meet business needs. My contributions focus on enhancing existing functionalities and implementing new features to improve overall system performance. Additionally, I have experience in test automation using Selenium to ensure software quality and reliability.

PARAMETA

Sep 2025 - Currently

- Development of complex Coupa–SAP integrations for electronic invoicing using Java, Apache Camel, and Groovy, including SOAP web services and message queue handling with Camel, implementing FIFO algorithms for automatic invoice distribution and XML/JSON data transformation.

EDUCATION

SYSTEMS ENGINEERING

Sep 2017 - Sep 2024

University of Quindío

ADDITIONAL INFORMATION

- **Technical Skills:** Software development.
- **Programming language:** Java,.
- **Librarys/Frameworks:** Spring, Spring Boot,Selenium, Angular,Karma,Jazmine, Junit, Mockito.
- **Databases:** Mysql, MongoDB, PostgresSql.
- **Plattforms:** AWS,Vercel,Azure.
